> APLIFILL AND OTHER GROUND ENHANCING PRODUCTS

APLIFILL is a highly hygroscopic compound, and therefore retains the moisture around the electrode if we use it to fill the excavation made for soil replacement.

AT-032L

Reference	Denomination	Description	Weight (kg)
AT-020L	Graphite powder	Backfill specifically for earthing systems	25
AT-030L	Thin clay-like powder	Backfill specifically for earthing systems	25
AT-031L	APLIFILL	Compound that reduces soil resistivity by retaining moisture	1
AT-032L	APLIFILL	Compound that reduces soil resistivity by retaining moisture	25
AT-0205L	Graphite powder	Backfill specifically for earthing systems	5
AT-0305L	Thin clay-like powder	Backfill specifically for earthing systems	5

Complies with IEC 62305, IEC 62561, UNE 21186, NF C 17-102
