> INSULATED CHIMNEY ANCHORAGE

Mast anchorage to attach to chimneys active. The insulation of the air rod anchorage is necessary in order to maintain the difference in potential between the parts of the DAT CONTROLER® PLUS for chimneys. The body of the DAT CONTROLER® PLUS has to be mounted more less 3.5 m below the chimney hole to avoid the heat of the gases deforming the lightning rod structure and leading to early corrosion. AT-088B anchorage should be fixed as follows: the first in the threaded union between the DAT CONTROLER® PLUS for chimney and the rod (AT-085B); the second at 125 cm for the first; the third in the threaded union between the two parts of the rod (AT-085B) and the fourth 25 cm from the top of the wall in order to ensure they are correctly fixed. In order to comply with UNE 21186, the AT-085B rod should be mounted so that it is 2 m higher than the chimney. Single extra support, ref: AT-081B.
